Assignment: Business Model Innovation in Healthcare IT (Analysis and Reflection)

Instructions

This week's discussion is designed to help you engage with the core concepts of Business Model Innovation (BMI) in healthcare IT. Read through the provided materials and respond to the three questions below.

Your responses should be thoughtful but concise—aim for **2–3 paragraphs per question**.

Submission guidelines:

- Keep each response concise but thoughtful (2–3 paragraphs maximum per question)
 - Use a specific healthcare setting or example (Philippines and/or global is fine)
 - Use the proper terminology from the week's materials (e.g., business model innovation; barriers; case study observations)
 - When relevant, connect your insights to earlier Business Model Canvas concepts (e.g., customer segments, channels, revenue streams, cost structure)
 - Submit as a single PDF document attachment via email
 - Submission Format:
LASTNAME_FIRSTNAME_WEEK_08_ASSIGNMENT.pdf
 - Submit before Friday next week (you have over 1 week to complete this)
-

Discussion Questions

Question 1: Recognizing BMI in Practice

Think about a healthcare service or technology you've personally used or observed in the past 2-3 years (this could be telehealth, a health app, a new service at a clinic, digital payment systems, etc.).

Reflect on: How did this service or technology change the way healthcare value was created, delivered, or paid for compared to traditional approaches? What made it feel different from "business as usual" in healthcare?

Note: Focus on describing what you observed rather than evaluating whether it was good or bad. The goal is to practice identifying when innovation is happening at the business model level, not just the technology level.

Question 2: Barriers Close to Home

The materials describe various barriers to BMI implementation, including regulatory constraints, organizational resistance, financial misalignment, and technology infrastructure challenges.

Consider: Which of these barriers do you think is most prominent or impactful in the Philippine healthcare context (or in your specific region/institution if you work in healthcare)? What have you observed that makes you identify this particular barrier as significant?

You may draw from news reports, personal observations, workplace experiences, or even your experiences as a patient or family member navigating the healthcare system.

Question 3: The "Why" Behind Healthcare IT Resistance

One recurring theme in the materials is that healthcare organizations and professionals sometimes resist new technology-enabled business models, even when these models promise better outcomes or efficiency.

Analyze: From your perspective—whether as a future health IT professional, current healthcare worker, or informed observer—why do you think this resistance exists? What might make a doctor, nurse, administrator, or even a patient hesitant to embrace a new digital health business model, even if it seems beneficial on paper?

Think beyond "people don't like change." Try to identify specific concerns, fears, or practical challenges that might drive this resistance in the healthcare context.

Thank You!

THANK YOU!
